

Stress Free IT Managed Backup Benefits

- Complete integrated solution that protects Windows-based servers and workstations in a distributed IT environment
- Efficient backup technology ensures that all backups will be completed in the backup window
- Local copy of your data to ensure quick restores, files can be restored in a matter of minutes
- Off-site copy of your data for disaster recovery
- Universal restore for full system recoveries to dissimilar hardware or virtual machines
- Eliminate the hassle of using tape backup
- Experience and reliability of the Expedient Technology Solutions team ensuring the backups are working properly

Are You Sure You Can Rely on Your Current Backup System When You Really Need to?

Take the Guess Work out of Your Backups with Stress Free IT Managed Backup Services

Expedient Technology Solutions' Stress Free IT Managed Backup service provides real-time disk backup, disk imaging, file level backup, and bare metal restore for Windows-based servers and workstations. Unlike conventional file-based only backups, Stress Free IT Managed Backup creates an image of the entire system state—including operating system, business applications, user settings, drivers and data— providing the capability to completely recover a downed system in a fraction of the time when compared to tape backup or other Internet-based backup solutions.

Efficient Backup Cycles

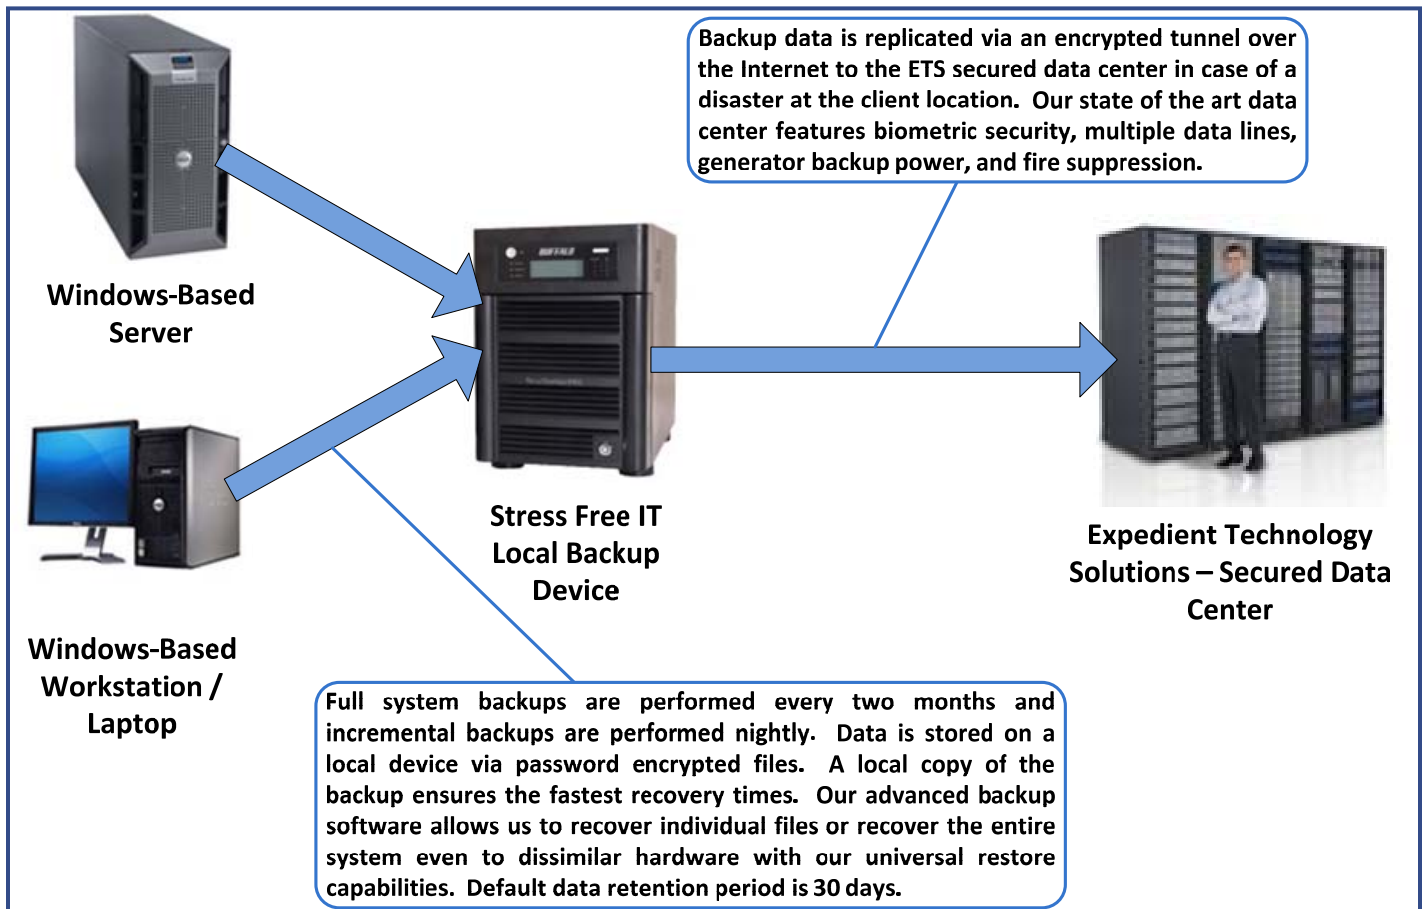

- Full backups are run bimonthly with daily incremental backups in between.
- Backups are conducted efficiently on reliable disk media, shortening the backup cycle dramatically.
- The process has a low footprint, reducing the impact it has on system performance.
- Works in the background without requiring a system shutdown or interruption to end users, making sure that systems are always available.

Local Copy of Your Data

- Your data is backed up initially to our redundant disk based Stress Free IT local backup device and stored in password protected, encrypted files.
- With a local copy of your data restore times can be 10 to 20 times faster than restoring data from an Internet only backup solution, no waiting for your data to download or for a physical media restore to be shipped overnight.
- Simple data restores can be performed in a matter of minutes and entire systems recovered in as little as an hour, dramatically minimizing downtime and helping to get employees back up and running quickly.

Off-Site Replication for Disaster Recovery

- Once a backup is created, replication technology ensures that the images are migrated from your Stress Free IT local backup device to our safe and secure off-site data center.
- In the case of a major loss such as flood, fire, or natural disaster, the backup images can be recovered from the off-site data center to replacement equipment quickly to ensure your business can get back up and running as fast as possible.
- Our off-site replication eliminates the need for an administrator or staff member of your business to remember to take media home or drop them off at a storage facility.

Universal Restore

- In a pinch, businesses are not always able to find similar replacement equipment. Stress Free IT managed backup allows systems to be restored to dissimilar hardware or even virtual machines, eliminating the procurement and interoperability factors when trying to get the business back up and running quickly.

Eliminates Tape Backup

- Tape backup has proven to be very unreliable, with failure rates as high as 50%. Increasing the risk is the complex and time-consuming nature of tape backup— especially for businesses with limited IT resources.

Support When You Need It

- Contact the Stress Free IT help desk for the restoring of files and folders at no additional charge.
- Disaster recovery and advanced restoration services will be performed at reduced hourly rates.

Pricing

- Pricing is based upon number of systems being backed up, amount of data being backed up, and required data retention periods.
- Contact sales@stressfreeit.com for a quote customized for your business' needs.

About Expedient Technology Solutions
